TEXTURECLAD

The stucco-like appearance of TextureClad will satisfy most local building ordinances that prohibit other metal wall panel applications. These panels are durable and provide protection from ultraviolet rays.

Each TextureClad panel is manufactured from 20-gauge galvanized steel. Panel width installed is 16". Both top and bottom of every panel has a 5/8" fold back. Formed ends allow the panel to nest end-to-end for stacking up a vertical wall, allowing for taller elevation applications. Installation of panels over a weatherproof membrane is recommended. Panel lengths range from 14" to 26'.

Primed and painted on both sides, the baked-on base coat is specifically formulated to adhere to the textured finish. Factory applied textured finish is a proprietary formula. The finish is resistant water, cracking, checking, chalking, mildew and loss of adhesion.

The panels are available in 24 unique colors, ask for VP color guide #6023.

TextureClad comes with a 20-year warranty for the panel and finish.
